MOAZ OMAR ALNAGEEB

AI & Cybersecurity | software Engineer

Email: moazalnageeb@gmail.com | Phone: +966506063242 LinkedIn:

https://www.linkedin.com/in/moaz-alnageeb-0b2a4a1b9/

Nationality: Saudi | Location: Saudi Arabia / Riyadh

PROFESSIONAL SUMMARY

MSc in Cybersecurity & AI and BSc in Software Engineering graduate with First-Class Honours. Expertise in AI integration, adaptive learning algorithms, and full-stack development demonstrated through award-winning academic projects and teaching roles. Completed 90+ accredited courses from Google, Samsung, IBM, Oxford, Harvard, totaling 800+ certified hours.

PROFESSIONAL EXPERIENCE

Business Solutions Consultant – IBM Maximo

eSolution | Saudi Arabia | April 2026 – Present

As a Business Solutions Consultant specializing in IBM Maximo EAM, I work closely with asset-intensive organizations to design, configure, and optimize enterprise maintenance and asset management processes. My role bridges business requirements and technical implementation, ensuring that maintenance operations are efficient, compliant, and aligned with organizational goals.

Key Responsibilities:

- Act as a functional consultant for IBM Maximo, supporting end-to-end implementation and enhancement of Enterprise Asset Management (EAM) solutions.
- Gather and analyze business requirements from stakeholders, translating operational needs into system configurations and workflows.
- Design and optimize preventive maintenance (PM) strategies, including time-based scheduling (e.g., 6-month cycles) and task generation logic.
- Support linear asset management processes, ensuring structured task visibility, execution tracking, and monthly maintenance planning for contractors.
- Manage and configure work order (WO) lifecycle processes, including creation, classification, approval flows, and completion tracking.
- Support Non-Conformance Report (NCR) workflows, ensuring proper tracking, resolution, and compliance reporting.
- Collaborate with contractors and operational teams to ensure timely completion of scheduled maintenance activities and performance monitoring.
- Contribute to system improvements, enhancing usability, reporting accuracy, and operational efficiency within Maximo environments.
- Provide functional support, troubleshooting, and user training for business and technical users.

MSc Dissertation Project - SkillsDotAI Platform

University of Sheffield | December 2024 – September 2025

Developed comprehensive AI-powered educational platform integrating adaptive learning, gamification, and mobile optimisation. Achieved 77% user recognition of adaptive features with strong satisfaction correlations (r=0.305, p=.002).

Technical Implementation:

- Architected full-stack application: Node.js/Express.js backend, PostgreSQL database, responsive HTML/CSS/JavaScript frontend
- Implemented multi-stage adaptive learning algorithm with real-time difficulty adjustment based on user
- performance
- Integrated Claude 3 Haiku AI for personalised feedback (r=0.577 correlation with satisfaction, p<.001)
- Developed gamification system: achievement badges, global leaderboards, progress tracking with Chart.js analytics
- Created robust session management with Express-session middleware and multi-layered security (Bcrypt,
- Helmet.js, rate limiting)
- Deployed containerised application using Docker on Render cloud platform

Key Features: Adaptive Mode with dynamic difficulty adjustment | Competitive Mode with global leaderboards | AI-powered contextual feedback | User analytics dashboard | Administrative system with CSV bulk upload | Mobile-first responsive design (79% mobile usage)

Research Impact: Evaluated by 100 participants (M=4.44/5 satisfaction) | 74% strong mobile preference | Empirical validation of transparent adaptive learning mechanisms

Technologies: Node.js, Express.js, PostgreSQL, JavaScript, HTML5, CSS3, Claude 3 API, Docker, Chart.js, Bootstrap 5, Bcrypt, Helmet.js

Final Year Project - Interactive Learning Platform

University of Leicester | December 2023 – May 2024

Developed interactive learning platform integrating ChatGPT AI for immediate quiz feedback,

investigating AI's impact on educational effectiveness.

Technical Implementation:

- Designed three-tier architecture: HTML/CSS/JavaScript frontend, Node.js/SQL backend Integrated ChatGPT via OpenAI API for personalised feedback generation Implemented user registration, quiz customisation, interactive interface, admin system with drag-and-drop
- interactions
- Demonstrated AI-powered personalised feedback's contribution to effective learning outcomes

Teaching Assistant

University of Leicester | October 2022 – April 2024

Teaching Assistant for five modules: Computer Architecture, Computing Fundamentals, Databases & Domain Modelling, Operating Systems & Networking, Software Engineering Project. Assisted labs and tutorials for improved student understanding of complex material Served as reference point for challenging issues requiring advanced support Developed expertise in patience, active listening, and problem-solving in educational contexts

Computer Science Teacher (Internship)

Beauchamp City Sixth Form, Leicestershire | June 2023 – July 2023

- Supported GCSE and A-level computer science students through Lion Heart Trust internship.
- Organised specialised sessions for Year 12 students on Object-Oriented Programming with designed lab tasks.
- Received certificate recognising dedication and contributions.

Lead Mentor

Student Union, University of Leicester | August 2022 – July 2023

- Managed information relay across communication channels ensuring efficient mentor recruitment.
- Delivered presentations to student audiences with confidence and charisma
- Created professional social media content demonstrating creativity and technical skills.

STEM Educator

MCS Projects Ltd - Raising Aspiration | June 2023 – 2024

Delivered STEM education across UK schools teaching Lego motor cars and E-FIT criminal identification systems. Notable: Presented at the University of Lincoln event attended by city mayor.

Society Founder - "What if?" Society

University of Leicester | September 2022 – 2024

Founded and lead community exploring hypothetical scenarios fostering learning and creativity.

- Oversee mini-research projects from research through presentation creation
- Conduct weekly meetings and collaborative projects developing research, critical thinking, teamwork skills

Student Learning Community (SLC) Leader

University of Leicester | September 2021 – October 2022

Led organisation creating study sessions and events (food, entertainment, competitions, prizes) from concept to execution.

- Managed team to achieve ticket sales targets for self-funded events despite financial constraints.
- Developed team leadership, project management, organisation, and communication expertise.

Induction Leader for Master's and First-Year Students

University of Leicester | January 2021, June-October 2022

- Welcomed 200 master's students with group activities enabling peer networking (January 2021).
- Created and delivered content for 600+ first-year computation/mathematics students across three sessions (2022).
- Taught transferable skills for university and career success receiving overwhelmingly positive feedback

Course Representative

University of Leicester | First Semester 2021

Advocated for first-year students' needs regarding modules and university services as replacement representative, gaining understanding of peer needs and representative responsibilities.

EDUCATION

MSc Cybersecurity and AI

University of Sheffield, Sheffield, England, United Kingdom | September 2024 – January 2026

Dissertation: "Enhancing Learner Engagement and Personalisation in AI-Powered Quiz Application through Adaptive Learning, Gamification, and Mobile Optimisation" **Key Modules:** Cybersecurity & AI Dissertation, Natural Language Processing, Scalable Machine Learning, Machine Learning & Adaptive Intelligence, Text Processing, Development of Secure Software, Cyber Threat Hunting & Digital Forensics,

Security of Control & Embedded Systems, Fundamental Security Properties & Mechanisms

BSc Software Engineering (First Class Honours)
University of Leicester, Leicester City, England, United Kingdom | September 2021 – June 2024
Achieved First-Class Honours in all three years with exceptional academic performance

Foundation Year - General Engineering (2:1)
University of Leicester, Leicester City, England, United Kingdom | September 2020 – June 2021

BTEC Level 2 ICT (Distinction*)
WQE College, Leicester, England, United Kingdom | September 2019 – June 2020

TECHNICAL SKILLS

Programming: Proficient (Node.js, JavaScript, HTML, SQL, Python) | Intermediate (C++, C#, Java Spring, CSS)
Specialisations: AI Integration (Claude API, OpenAI API), Full-Stack Web Development, Database Design (PostgreSQL, SQLite), Cloud Deployment (Docker, Render), Security Implementation (Bcrypt, Helmet.js, Rate Limiting), RESTful API Design, Responsive Web Design, Session Management, Data Visualisation (Chart.js), Adaptive Learning Algorithms, Maximo - IBM
Languages: Native Arabic | Fluent English | Beginner-Intermediate Japanese

Extra Courses/Certifications

Data Science & Programming
- CS50's Introduction to Computer Science – Harvard University
- Python Basics for Data Science – IBM
- Analysing Data with Python – IBM
- Visualizing Data with Python – IBM

Cloud & AI
- Professional Certificate in Google Cloud Foundations – edX
- Digital Skills: Artificial Intelligence – Accenture

Marketing & Analytics
- Foundations of Online Marketing – Google
- Digital Skills: Web Analytics – Accenture

UX & Product Design
- Creating a Great User Experience for Mobile Apps – University of Leeds
- Designing for a Diverse and Inclusive Future – Samsung

Technology & Engineering
- Introduction to Physical Computing – Lancaster University
- Endangered Archaeology: Using Remote Sensing to Protect Cultural Heritage – University of Oxford

Professional Development & Leadership
- Microsoft UK Embrace ERG Mentoring Programme – Microsoft
- Practicing Gratitude Teach-Out – University of Michigan

AWARDS & ACHIEVEMENTS

Best Software Engineering Group Project (Group Leader)

University of Leicester | January 2023 – June 2023
Led team winning Best Group Project Award competing against 250+ students. Developed innovative placement management system selected for university-wide implementation.

Key Features: User-friendly placement preference platform with swift employer correspondence | Smart navigation bar | "Pending Placements" tracking for tutors | "Flagged Forms" mechanism with built-in emailing | Students Information Preview | Comprehensive Help page | Dynamic statistics dashboard with data manipulation and visualisation

Recognition: System selected by university administration for institution-wide implementation, demonstrating practical impact and ability to deliver real-world solutions.
