Exploring the relationship between anxiety and depression

https://www.open.edu/openlearn/science-maths-technology/exploring-the-relationship-between-anxiety-and-depression/content-section-0

Course summary

This free advanced level course, Exploring the relationship between anxiety and depression, serves as an introduction to masters level study in neurosciences and mental health. Focusing on anxiety and depression, you will consider key issues concerning diagnosis, causes and interventions, exploring how these conditions relate to each other. You will also explore some of the more contemporary and controversial findings within the field.

Learning outcomes

By completing this course, the learner should be able to:

- Understand anxiety and depression from biopsychosocial perspectives
- Discuss contemporary issues in mental health science related to anxiety and depression
- Recognise different lines of evidence and appreciate the uncertainty, ambiguity and limits of current knowledge in the study of mental health science

Completed study

The learner has completed the following:

Section 1

Anxiety and depression

Section 2

The biopsychosocial model of mental health: revisited

Section 3

Overlap of symptoms between anxiety and depression and comorbidity with other conditions

Section 4

Inter-individual variability and factors that contribute ‘resilience’ to anxiety and depression

Section 5

Psychedelics for the treatment of anxiety and depression?

Section 6

‘Electrotherapy’ for anxiety and depression?

Section 7

Conclusion
