Course summary

This free course will help you to navigate your own path through the complex landscape of smart cities. You'll hear from smart city innovators and entrepreneurs, city leaders, communities and business, connecting with learners from around the world to reflect on issues facing smart cities of different sizes and situations.

Learning outcomes

By completing this course, the learner should be able to:

- describe different approaches to smart city design and delivery using information provided in the case study materials
- co-create a smart cities project in a community using a range of tools and techniques
- outline key issues with the development of smart cities and discuss personal views on these.

Completed study

The learner has completed the following:

Week 1

Introduction and guidance

Introduction to smart cities

Week 2

The city as a system of systems

Week 3

Smart citizens
