Statement of participation

Moaz Alnageeb

has completed the free course including any mandatory tests for:

Water and human health

This 9-hour free course looked at the various obstacles, natural and man-made, that threaten the world's available supply of potable water.

Issue date: 22 July 2022

COURSE CODE: **SDK125_1**

Water and human health

https://www.open.edu/openlearn/science-maths-technology/biology/water-and-human-health/content-section-0

Course summary

Water is a natural resource that is vital for human survival and health, although only a tiny fraction of the Earth's supply is available to humans and terrestrial animals. In this free course, Water and human health, we look at threats, such as pollution, to water's capacity to support life around the world.

Learning outcomes

By completing this course, the learner should be able to:

- define and use in context, or recognise definitions and applications of, each of the terms printed in bold in the text
- identify some of the reasons why clean, fresh water is an increasingly scarce resource for many people in the world
- explain what is meant by the bioaccumulation of xenobiotic chemicals and identify the implications that this has for what people can safely eat
- distinguish between the effects on human health of high and low levels of environmental pollution by nitrogen compounds5 explain what is meant by an endocrine disruptor.

Completed study

The learner has completed the following:

Section 1

Water as a global resource

Section 2

The global water cycle

Section 3

The distribution of water and its use by people

Section 4

Chemical pollution of water

Section 5

Conclusion

Section 6

Self-assessment questions
